PROFESSIONAL SUMMARY

Computer Technology and Mechatronics student with hands-on IIoT and PLC experience, including an internship at Siam Toyota Manufacturing. Bridges OT and IT using OPC UA, Modbus, and Node-RED. Conversational Chinese; available from Feb 2027.

CORE SKILLS

Industrial Automation & OT: PLC Programming (CODESYS, GX Works3), Industrial IoT (IIoT), Industrial Communication Protocols: OPC UA, Modbus TCP/RTU, MQTT, EtherNet/IP, RS-485, Factory I/O (Digital Twin)

Embedded Systems & Hardware: Arduino, ESP32, Microcontroller Interfacing, Circuit Wiring & Troubleshooting, Raspberry Pi

Software & IT Systems: Node-RED, React, Next.js, Node.js, Bun.js, Tailwind CSS, PostgreSQL, Supabase, Linux, Docker, GitHub

Languages: Thai (Native), Chinese Conversational Chinese (1 year of study in China), English (Basic technical proficiency)

EDUCATION

Laiwu Vocational and Technical College (莱芜职业技术学院) — Shandong, China

Diploma Senior (专科) in Mechatronics (机电一体化技术), Intelligent Manufacturing Department (智能制造系) Apr 2026 – Jan 2027 (Expected)

Chonburi Technical College — Chonburi, Thailand

High Vocational Certificate (ปวส.), Computer Technology Expected graduation: March 2027

PRACTICAL & WORK EXPERIENCE

Siam Toyota Manufacturing Co., Ltd. — Chonburi, Thailand

Sep 2024 – Feb 2025

Industrial IoT & Automation Intern (Innovation Department)

Project: AGV Battery Alert & Monitoring Dashboard (SCB Foundation "ต่อยอดอัจฉริยะ" Industrial IoT Program 2024)

- Built a web dashboard for real-time AGV status and battery alerts, on top of an existing PLC data pipeline. Designed data communication pathways to improve fleet tracking and operational transparency on the plant floor.
- Worked with engineers to validate signal reliability across the wireless network.
- Link: scbfoundation.com/project_detail.php?project_id=1879

KEY PROJECTS & ACHIEVEMENTS

Digital Twin Sorting System — Factory I/O + CODESYS + Node-RED

Demo video: [factory I/O + codesys + node-red + OPC UA](#)

- Built an end-to-end industrial digital twin simulating a height-based parcel sorting conveyor system.
- Programmed control logic in CODESYS (Control Win V3 x64) and established OPC UA communication to mirror physical states inside Factory I/O.
- Designed an interactive Node-RED telemetry dashboard displaying real-time package counts, sorting states, and system alarm logs.

WorldSkills Competition Project Development

- Selected to engineer an integrated industrial solution combining PLC automation, IoT data logging, AI-assisted sorting and conveyor line control.
- Integrated Raspberry pi /microcontroller sensors with industrial controllers to deliver flexible, low-cost edge monitoring.

Specialized Technical Training: Electrical Automation

- Completed intensive smart manufacturing electrical training at Laiwu Vocational and Technical College (August 2026), focusing on industrial wiring, cabinet design, and safety protocols.
